Bioregulation Therapy
A revolutionary approach to strengthen the body and restore wellness

What is BRT
Bioregulation Therapy (BRT) is a unique communication- and energy-focused modality that uses advanced pulsed electromagnetic field (PEMF) technology to support biological communications at the cellular level – ultimately helping the body to better self-regulate, adapt and heal naturally.

How BRT can help with chronic disease and hypersensitivities
Cellular communication and electromagnetic signaling is critical to supporting the body’s adaptation and self-regulation processes which deal with the symptoms and effects of cell deterioration, disease and toxins – including chronic disease and hypersensitivities.

Chronic disease is the result of adaptation and synchronization problems at the whole body, tissue and organ levels. Hypersensitivities are related to basic disturbances in the body’s inner communication systems because of electromagnetic over-reactions to both substance and environmental triggers.

BRT combines advanced signaling technology with the body’s own regulation and healing processes to stimulate cells and address these issues. Long-term observation shows that BRT can help to reestablish natural adaptation and synchronization activities, as well as dissipate reactions to substance and environmental hypersensitivities.

How BRT works
Every organ in the body has its own bioelectromagnetic field, and every single cell in the body communicates via electromagnetic signals, or fields, at the overall rate of trillions of chemical reactions per second. In order to maintain balance and sustain good health, all of the body’s organs, tissues and subsystems require extremely precise communications to effectively process these instantaneous exchanges. When these critical communications exchanges are disrupted, the body’s cells, tissues and organs are compromised and unhealthy symptoms follow.

A number of internal and environmental sources contribute to the breakdown of the body’s inner communication processes. These sources include chemicals, toxins, nutritional deficiencies, emotional stressors, unprocessed memories, negative thought processes, inherited and acquired blocks at the subconscious level, microbes and electrosmog – high-power electrical lines, microwaves, computers, cell phones and other common electronic devices that, over time, may emit harmful electromagnetic fields.
During BRT sessions, BRT devices safely deliver extremely low intensity electromagnetic signals at the cellular level. These BRT signals create gentle electromagnetic field changes that may induce the body’s own self-regulation and healing process. More specifically, BRT signals are sent to targeted communication channels in the body. As the signals pass through the tissues, they help the cells to clear out blockages and restore healthy communication paths.

Once this happens, the body can more efficiently process the electrical and chemical exchanges associated with those channels and address imbalances or dysfunctions in those areas – leading to improved adaptation capabilities and natural self-healing activities.

Innovative and industry-leading technology
LENYO BRT devices are unique in the industry in that they all feature an advanced signaling technology that enables extreme precision when targeting cells in the body. Rather than generic, broad-range, high-intensity signals that are not able to effectively target the communication channels associated with the areas of the body that need repair, LENYO BRT products combine frequency, intensity, signal modulation and customized program design to stimulate the specific channels needed to best support the natural electromagnetic activities of the targeted tissues and organs.

A broad range of diverse applications
Beneficial for a wide variety of applications, LENYO advanced BRT devices work together with the body’s own inner communication processes to address a variety of needs and purposes. Specific application areas include:

- Health and wellness – anti-aging • allergies • contagious diseases and infections • detoxification • digestion • eyesight and hearing • fatigue • infertility • inflammation • mental balancing • pain • relaxation • shingles • stress reduction • wound healing • chronic disease
- Sports – general sports activities • high-performance • injury recovery
- Workplace – circulation • concentration • digestion • electrosmog • ergonomic problems • fatigue • stress • productivity
- Education and learning – circulation • concentration • hearing • learning processes • memory • visual perception

Versatile, user-friendly BRT devices
LENYO BRT devices are available in a variety of size and feature options – from professional multi-user systems to pocket-size, mobile devices that can be used in the home, at the office or on the-go. Designed for optimum efficiency, LENYO BRT devices are ideal for professional practitioners, large health and wellness facilities, spas, sports centers, rehab and physical therapy facilities, offices, schools and the general public. With the most comprehensive range of BRT product choices in the industry, LENYO BRT devices are non-invasive, easy to operate and safe for adults, seniors and children.

Established and recognized around the world
Electromagnetic field therapy has been studied and practiced for decades, and in Europe alone, there are over three million sessions practiced each day. In the United States, electromagnetic field therapy has been available for over 30 years, and is approved by the FDA to fuse bones, and cleared to address a number of indications, from pain management to psychological problems.

ABOUT LENOY HIPPOCAMPUS. A leader in bioregulation technology and devices, Leno Hippocampus provides advanced bioregulation therapy (BRT) devices and solutions to professional practitioners in the medical, wellness, sports, enterprise, educational and veterinarian fields, as well as home-use products to the general public. A unique communication - and energy-focused approach to health and wellness, BRT combines advanced pulsed electromagnetic field signaling (PEMF) with the body’s own biological communications to help restore natural regulation and healing activities. The LENOY line of BRT products includes office, home and mobile devices.

LENYO BRT devices are available in a variety of size and feature options – from professional multi-user systems to pocket-size, mobile devices that can be used in the home, at the office or on the-go. Designed for optimum efficiency, LENOY BRT devices are ideal for professional practitioners, large health and wellness facilities, spas, sports centers, rehab and physical therapy facilities, offices, schools and the general public. With the most comprehensive range of BRT product choices in the industry – including both endogenous and exogenous options – LENOY BRT devices are non-invasive, easy to operate and safe for adults, seniors and children.

LENYO HIPPOCAMPUS BRT devices have not been evaluated by The Food and Drug Administration (FDA). They are not meant to diagnose, treat, cure or prevent any disease. They do provide general benefits recognized for biofeedback and PEMF-based therapy devices. Individuals suffering from any disease, illness or injury should consult with a physician or healthcare professional before using any BRT device. LENOY HIPPOCAMPUS DEVICES ARE LISTED WITH THE FDA AS CLASS 1 THERAPY DEVICES Click here for additional Disclaimers.
